SUMMARY

Data scientist with one year of commercial experience in forecasting, pricing experiments and ML pipelines, who also works like a founder's office hire: owns unclear problems end to end, researches markets and competitors, and has worked directly with a founder on growth and customer acquisition. Builds in Python, FastAPI and LLM tooling.

EXPERIENCE

RoboCurve (inspect robots, YC backed)

2026 to Present

Open Source Contributor

Remote

- Contribute to inspect robots, an open source evaluation framework for physical AI that runs any policy, from LLM agents to vision language action models, against any embodiment with auditable logs.
- Built a bash and zsh completion subcommand for the command line interface using only the standard library, per the project's dependency rules, with unit tests and a changelog entry.
- Added an environment diagnostics block to the *doctor* command that reports interpreter, platform, package version and optional extras, to help debug setup issues.

Independent Freelance

2026

AI Automation and Web Developer, Netherlands and United States clients

Remote

- Deliver production websites and internal workflow automation for clients in the Netherlands and United States.
- Designed an n8n pipeline for a Rotterdam student events platform that turns partner Instagram posts into structured event listings: an RSS trigger, a vision capable model extracting fields against a fixed JSON schema with confidence flags, and a dedupe step. Output goes to a reviewable document, not a live table, until extraction quality clears human review.

Labelbox

Dec 2025 to Present

Contract AI Trainer and Model Evaluator

Remote

- Train and evaluate a voice assistant on Labelbox's contractor platform, reviewing responses against detailed guidelines and flagging failure modes.
- Write evaluation rubrics that surface failure modes an aggregate score hides, and apply them consistently across high volumes of structured labeling and model evaluation tasks.

Mythos

Jul 2026 to Aug 2026

Growth and Fundraising Support (Contract)

Remote

- Worked directly with the founder on scaling, growth strategy and customer acquisition during an early scaling push.
- Connected the founder with VCs and funders to support fundraising conversations.

Arabania Indo Arabic Restaurant

Jun 2024 to May 2025

Data Scientist

Lucknow, India (Hybrid)

- Built demand forecasting models in Python (statsmodels, scikit learn) across 100K+ inventory records for daily inventory planning; food waste fell by roughly 20% and procurement costs by 12%.
- Ran pricing experiments using hypothesis testing and statistical inference, identifying a pricing change associated with a 15% gross margin improvement within two months.
- Automated recurring reporting in SQL (CTEs, window functions) to surface demand and seasonality patterns, cutting manual reporting effort by around 40%.

PROJECTS

Power Price Forecasting and Trading Pipeline

GitHub

Python, XGBoost, pandas, ENTSO-E API

- Built an end to end pipeline that ingests day ahead electricity prices with load and renewable drivers, runs data quality and economic sanity checks, and forecasts prices with XGBoost against a lag 24 baseline.
- Converted forecasts and confidence intervals into LONG, SHORT or NO TRADE signals, with a PnL simulation and an interactive chart of forecasts, signals and cumulative PnL.

AI Competitor Research Platform

Live Demo | GitHub

Python, FastAPI, React, Firecrawl, Playwright, PostgreSQL, ChromaDB, Groq, OpenAI, Anthropic, Docker

- Built a competitive intelligence pipeline that collects competitor information, validates structured observations, stores evidence with provenance and produces run scoped analysis and reports.
- Layered web collection (Firecrawl, Playwright, HTTP fallback) with retry handling, schema validated extraction with corrective retries, run level telemetry and a RAG workflow over stored research.

SKILLS

Business and Growth

Growth and pricing experiments, A/B testing, hypothesis testing, competitor and market research, reporting and workflow automation (n8n)

Data and ML

Python, SQL, pandas, NumPy, scikit learn, statsmodels, XGBoost, forecasting, Power BI, Tableau

AI and Backend

OpenAI, Anthropic, Groq, RAG, structured extraction, FastAPI, Flask, REST APIs, PostgreSQL, Docker, GitHub Actions; React, Streamlit, Flutter

EDUCATION

Indian Institute of Technology, Madras

2022 to 2026

B.Sc in Data Science and Applications
