SUMMARY

Data scientist with one year of commercial experience in forecasting, pricing experiments and ML pipelines, who also works like a founder's office hire: owns unclear problems end to end, researches markets and competitors, and has worked directly with a founder on growth and customer acquisition. Builds in Python, FastAPI and LLM tooling. B.Sc in Data Science, IIT Madras.

EXPERIENCE

Arabania Indo Arabic Restaurant

Data Scientist

Jun 2024 to May 2025
Lucknow, India (Hybrid)

- Built demand forecasting models in Python (statsmodels, scikit learn) across 100K+ inventory records for daily inventory planning; food waste fell by roughly 20% and procurement costs by 12%.
- Ran pricing experiments using hypothesis testing and statistical inference, identifying a pricing change associated with a 15% gross margin improvement within two months.
- Automated recurring reporting in SQL (CTEs, window functions) to surface demand and seasonality patterns, cutting manual reporting effort by around 40%.

Mythos

Growth and Customer Acquisition (short engagement)

Jul 2026 to Aug 2026
Remote

- Worked directly with the founder on growth and customer acquisition experiments during an early scaling push.

Independent Freelance

Automation and Web Delivery, Netherlands and United States clients

2026
Remote

- Delivered production websites and internal automation for clients.
- Built an n8n pipeline for a Rotterdam student events platform: an RSS trigger picks up partner Instagram posts, a vision capable model extracts event fields from the caption and flyer against a fixed JSON schema with confidence flags on missing values, and a dedupe step skips processed posts.
- Routed output to a reviewable document instead of a live table until extraction quality cleared human review.

RoboCurve (inspect robots, YC backed)

Open Source Contributor

2026 to Present
Remote

- Contributed a bash and zsh completion subcommand and an environment diagnostics block for the "doctor" command, with unit tests and changelog entries, open for upstream review.

Labelbox

Contract AI Trainer and Model Evaluator

2025 to Present
Remote

- Train and evaluate a voice assistant through the contractor platform, writing rubrics that surface failure modes an aggregate score hides and applying them consistently at volume.

PROJECTS

Power Price Forecasting and Trading Pipeline

Python, XGBoost, pandas, ENTSO-E API

GitHub

- Built an end to end pipeline that ingests day ahead electricity prices with load and renewable drivers, runs data quality and economic sanity checks, and forecasts prices with XGBoost against a lag 24 baseline.
- Converted forecasts and confidence intervals into LONG, SHORT or NO TRADE signals, with a PnL simulation and an interactive chart of forecasts, signals and cumulative PnL.

AI Competitor Research Platform

Python, FastAPI, React, Firecrawl, Playwright, PostgreSQL, ChromaDB, Groq, OpenAI, Anthropic, Docker

Live Demo | GitHub

- Built a competitive intelligence pipeline that collects competitor information, validates structured observations, stores evidence with provenance and produces run scoped analysis and reports.
- Layered web collection across Firecrawl, Playwright and an HTTP fallback, with retry and rate limit handling around provider calls.
- Validated extraction against schemas with corrective retries, run level telemetry, a deterministic demo mode and a RAG workflow over stored research.

SKILLS

Business and Growth: Growth experiments, pricing experiments, A/B testing, hypothesis testing, competitor and market research, reporting automation, workflow automation (n8n) **Data and ML:** Python, SQL, pandas, NumPy, scikit learn, statsmodels, XGBoost, forecasting, Power BI, Tableau **AI and Backend:** OpenAI, Anthropic, Groq, RAG, structured extraction, FastAPI, Flask, PostgreSQL, Docker, GitHub Actions, REST APIs; React, Streamlit, Flutter

EDUCATION

Indian Institute of Technology, Madras

B.Sc in Data Science and Applications

2022 to 2025
